Executive Summary

This document describes the systems and processes required for the maintenance and safe operation of passenger and goods lifts. Application of the Policy will ensure that NHSL meets their statutory duties and operates within approved safety standards and codes of Practice.

1. Within any client (NHS Lothian) /contractor relationship both parties have duties under health and safety law.

2. Lift contractors can be engaged across all Services and the requirements are applicable whenever this occurs.

3. All NHS Lothian line managers involved in the contracted work will ensure that measures are in place to ensure full cooperation by all those involved.

4. NHS Lothian as the client must decide what is needed to do to effectively manage and supervise the work of lift contractors. The more impact the lift contractor’s work could have on the health and safety risks of anyone likely to be affected, the greater the management and supervisory responsibilities of the lift contractor and NHS Lothian.

5. ALL Contractors must follow NHS Lothian Control of Contractors Policy and be sufficiently inducted on each site.

Minimum Implementation Standards

1. The department/area has directed this policy and associated procedure to its managers and employees who are regularly involved in developing policies and procedures.

2. The department has assurance from those employees that they have read and understood this procedure.

3. The department has a process to systematically consider the relevance of existing/ new/ or revised policies to employees in their area.
4. All employees in the department are clear as to the policies and procedures that they are required to read and implement as part of their duties.

All departments establish processes to be assured that they implement policies that apply to them, and act to ensure that compliance is achieved, and that there is reduced variation in practice.

1.0 Purpose

The purpose of this policy is to ensure that lifts belonging to, or maintained by NHS Lothian, are constructed, operated, and maintained to the highest standards, and comply at all times with current statutory requirements, industry recognised guidance and standards, as well as Scottish Health Technical Memorandum (SHTM 08-02 Lifts) Dated Feb 2013.

2.0 Policy statement

This policy sets out the commitment of NHS Lothian to provide a safe and secure environment for patients, visitors and staff. It applies to all persons who have access to, use of, or are responsible for the maintenance of NHS Lothian premises.

The policy also provides guidance and references to assist in implementing the requirements set out within the lift policy.

This document sets out the Lift working policy, and provides reference to procedures in operation within NHS Lothian. The procedures should be regarded as a guide to minimise risk associated with Lifts at work.

Ensure compliance with all relevant health and safety legislation and any NHS Lothian Policies.

3.0 Scope

This policy applies to all NHS Lothian premises whether owned or occupied under lease or other Service Level Agreements (SLAs), and Private Finance Initiatives (PFI). Where the management of buildings/areas occupied by NHS Lothian staff and/or patients is carried-out by others, the requirements of this policy remain applicable, although implementation of the site specific Risk Management requirements are managed by local policies.

It remains NHS Lothian’s responsibility to ensure that the requirements of this policy are notified to and complied with by all.

4.0 Definitions

4.1 Organisation and Management

Management is defined as the owner, occupier, employer, general manager, chief executive or other person in a healthcare organisation, or their appointed responsible contractor, who is accountable for the premises and who is responsible for issuing or implementing a general policy statement under the Health and Safety at Work Act 1974.

Vertical transportation is a complex service with potentially significant areas of risk. Effective management of this service requires good site knowledge of equipment and key internal/operational vertical traffic requirements, together with good industry knowledge and high quality servicing and statutory compliance arrangements.
In order to achieve this, NHS Lothian will appoint the following organisations/persons:

- Designated Person (Lifts)
- Duty Holder
- Authorising Engineer (Lifts)
- Authorised Person (Lifts)
- Competent person
- Vertical transportation specialist consultancy
- Specialist maintenance contractor

4.2 Audits and Risk Assessments

NHS Lothian will with the assistance of other relevant organisations, carry out audits and risk assessments of all its Lift installations taking into consideration factors such as general compliance with recognised and applicable standards, general condition of lift cars and lift machinery, servicing arrangements, percentage of available usage time, number of unplanned interventions, control systems, equality act issues and risks to vulnerable passengers.

Information gained from this exercise will be used in the preparation of an on-going plan for safety improvements, modernisation and servicing. The audits and risk assessments will be reviewed annually.

4.3 Maintenance of lifts

NHS Lothian will ensure that all lifts are included in a programme of planned inspections and maintenance. The level of this service will be agreed between the Designated Person (lifts), and the Vertical Transportation Specialist Consultancy. The inspections and maintenance will be carried out under a contract by the Specialist Maintenance Contractor.

4.4 Statutory inspections

These will be carried out by the Competent Person in accordance with current legislation. Inspection reports will be issued to NHS Lothian which will take appropriate action to ensure the continued safe operation of the Lifts.

5.0 Implementation roles and responsibilities

5.1 Designated Person (Lifts)

The Designated Person (Lifts) is an individual appointed by a healthcare organisation who has overall authority and responsibility for lifts and their safe operation. They have a duty to prepare and issue a general policy statement in relation to lifts and their safe operation, including the organisation and arrangements for carrying out that policy and to ensure that the lift operations are kept to a satisfactory standard including statutory mandatory examinations, maintenance, record keeping and emergency procedures.

The Designated Person (Lifts) is responsible for ensuring that an Authorising Engineer (Lifts) and Duty Holder are appointed.
5.2 Duty Holder

The Duty Holder (as defined in HSE Publication INDG339) is legally responsible for ensuring that the lift is safe to use and that it is thoroughly examined. These responsibilities include:

- Maintaining the lift so that it is safe to use
- Selecting and appointing the competent person
- Ensuring that the lift is examined at statutory intervals
- Keeping the competent person informed of any changes in the lift operating conditions which may affect the risk assessment.
- Making relevant documentation available to the competent person
- Acting promptly to remedy any defects
- Ensuring that all documentation complies with the Regulations
- Record keeping

5.3 Authorising Engineer (Lifts)

The Authorising Engineer (Lifts) is a chartered engineer with appropriate experience, whose appointment is the responsibility of the Designated Person (Lifts). The person appointed should possess the necessary degree of independence from local management to take action including the implementation, administration and monitoring of the safety arrangements defined in BS7255: 2001.

The Authorising Engineer (Lifts) will act as the assessor and make recommendations for the appointment of Authorised Persons and monitor their performance.

5.4 Authorised Person (Lifts)

The Authorised Person (Lifts) is nominated by the Authorising Engineer (Lifts) and has the key operational responsibility for the specialist service. The person will be qualified and sufficiently experienced and skilled to fully operate the specialist service.

5.5 Competent Person (Lifts)

A Competent Person (Lifts) is a person, suitable trained and qualified by knowledge and practical experience, and provided with the necessary instructions to enable the required work to be carried out safely (as required by BS 7255). It is considered unlikely that an NHS staff employee will have the necessary practical experience and theoretical knowledge to carry out this role and it would normally be carried out by a specialist contractor.

5.6 Specialist Maintenance Contractor

A contractor who is a member of The Lift and Escalator Industry Association (or other suitably recognised national federation) and has been approved by both the Vertical transportation Specialist Consultancy and the Designated Person (Lifts). The contractor shall be currently accredited including, ISO 9000 Quality Assurance series including design, Suitable notified body approval status.

The workforce shall be nominated to work on the Board’s lifts, along with the ability to safely isolate the electrical supply using the “letter of attestation” process.
5.7 **Vertical Transportation Specialist Consultancy**

An organisation with sufficient knowledge of and standing within the Vertical Transportation industry to be able to assist and advise NHS Lothian in all aspects of construction, modernisation, maintenance management, traffic analysis, equipment condition, suitable risk assessment and compliance with current and also relevant legislation and industry standards.

8.0 Stakeholder consultation

This document has been discussed and reviewed by Estates Management, Partnership and relevant Authorising Engineer.

9.0 Monitoring and review

This policy will be subject to review three years from the date of issue, or sooner if an audit or review has identified significant gaps, failures or omissions.
