

Screening Could Save Your Sight

Diabetes can damage your eyes without you knowing. Screening catches this early.

Our screening is specially designed to find problems caused by diabetes, so please attend both this and your regular optician appointments.

Most people receive reassuring news at these screenings, don't miss out.

Early detection helps prevent sight loss. Let's make this a part of your diabetes care.

Call us on 0131 536 4145 between 9:00am and 15:30pm

What will happen at my appointment?

First, we'll check your sight. Then we may put eye drops in, which can feel a bit strange and make your vision blurry, but don't worry, it's temporary. Then, we'll take pictures of the back of your eyes using a digital retinal camera - it won't touch your eyes at all. The whole thing? Just about half an hour.

What if the appointment date or time don't suit me?

If you can't make it, please let us know. Your slot could then be used by another patient. Call us on 0131 536 4145 between 9:00am and 15:30pm to rearrange.

Our friendly team will help find a time or place that suits you better.
