

The scan is processed on a computer to show different parts of your body. The area the doctor needs to see is highlighted.

On the scan, bone is white, air is black, soft tissue is varying shades of grey.

The computer can even use the information to make 3D models of your body – such as these images of the spine.

FACTS ABOUT CT

- CT stands for **C**omputerised **T**omography.

- A CT scanner uses x-rays to create pictures. It takes multiple images or 'slices' at different angles which are then stacked like slices of bread to make a 3D picture of inside your body.

- CT uses a computer and a lot of mathematical algorithms to reconstruct the images in different ways to visualise different parts of your anatomy.

- Godfrey Hounsfield invented the CT scanner in 1972. At first CT scans could take 30 minutes or more. Today with advances in technology similar scans can take only 1 or 2 seconds.

Information for parents and carers -

What is a CT scanner and how does it work?

The initials CT stand for Computerised Tomography.

CT is a method of obtaining high quality 3D images using x-rays. Multiple images or "slices" are taken at different angles which are then processed by a computer to produce a 3D picture of the body. It can image both bone and soft tissue.

What will the CT examination involve?

Your child will be positioned on the bed which moves into the scanner as it takes the scan. The CT scanner looks rather like a large polo-mint and sounds a bit like a washing machine. It is important that your child keeps very still.

The radiographer will be able to see your child and talk to them through a two-way intercom at all times throughout the scan which typically takes from 5 – 10 minutes.

Your child will need to have an injection of contrast (x-ray dye) which shows up in the organs and blood vessels. The needle and tube through which we give the contrast is called a cannula. We can use skin numbing cream to hopefully help with any discomfort when the needle is put in. This is sometimes known as 'magic cream'.

When an injection of dye is needed, we will ask about any medical history of allergies, diabetes, asthma or kidney problems. The dye may briefly leave a metallic taste in the mouth and a warm sensation through your child's body.

You will be asked to stay in the scanning room with your child.

If you are or may be pregnant you will not be able to stay in the room while the scan is being done. In this case another familiar adult should stay with your child. Other children will not be allowed in the scanning room so please make arrangements for them to be looked after at home.

What happens after the scan?

Once the examination is complete, as your child has had an injection of contrast you will be asked to remain in the department for a further 15 minutes. Your child should experience no discomfort following this scan and can return to their normal daily routine.

What Preparation is required ?

If your child is having a body scan (not a head scan), zips or clips on clothing can affect the images, please bring pyjamas or plain clothes such as a plain t-shirt (with no sparkly motifs) and jogging bottoms for your child to wear.

All watches, removable dental plates, braces, hearing aids, jewellery including piercings must be removed prior to scanning.

What if my child is taking medication?

Do not stop any prescribed medications. The scan will not affect the usefulness of the drug. If you have any questions about this please contact the department.

How will I get the results of the test?

The results will be sent to the doctor who asked for this test, normally within 7-10 days. The doctor who has asked for the test will then send you a follow-up appointment to discuss your results with them. If this was your GP, please contact them directly after 7–10 days.

What if I do not speak English?

If you need help with the English language please phone **0131 312 0896** as soon as possible and we can arrange an interpreter for you.

How do I get to the CT Department.

The CT Department is in the Imaging Department on the ground floor. Book in for your appointment at the Imaging Department reception.
