

The CT scanner looks like a large doughnut.

You need to lie very still on the bed for your scan.

The bed will move into the doughnut as it takes the scan.

The scan is processed on a computer to show different parts of your body. The area the doctor needs to see is highlighted.

On the scan, bone is white, air is black, soft tissue is varying shades of grey.

The computer can even use the information to make 3D models of your body – such as these images of the spine.

FACTS ABOUT CT

- CT stands for **C**omputerised **T**omography.
- A CT scanner uses x-rays to create pictures. It takes multiple images or 'slices' at different angles which are then stacked like slices of bread to make a 3D picture of inside your body.
- CT uses a computer and a lot of mathematical algorithms to reconstruct the images in different ways to visualise different parts of your anatomy.
- Godfrey Hounsfield invented the CT scanner in 1972. At first CT scans could take 30 minutes or more. Today with advances in technology similar scans can take only 1 or 2 seconds.

Information for parents and carers -

CT scan - Post-feed

What is a CT scanner and how does it work?

The initials CT stand for Computerised Tomography.

CT is a method of obtaining high quality 3D images using x-rays. Multiple images or "slices" are taken at different angles which are then processed by a computer to produce a 3D picture of the body. It can image both bone and soft tissue.

What will the CT examination involve?

Your child will be positioned on the bed which moves into the scanner as it takes the scan, they will not feel anything during the scan. The CT scanner looks rather like a large polo-mint and sounds a bit like a washing machine.

It is important that your child keeps very still for the scan. This is best managed by getting them to sleep during the scan after they have just had a feed.

The radiographer will be able to see your child and talk to you through a two-way intercom at all times throughout the scan which typically takes from 5 – 10 minutes.

You will be asked to stay in the scanning room with your child.

If you are or may be pregnant you will not be able to stay in the room while the scan is being done. In this case another familiar adult should stay with your child. Other children will not be allowed in the scanning room so please make arrangements for them to be looked after at home.

What happens after the scan?

Once the examination is complete, your child will be able to leave the department. They should experience no discomfort following this scan and can return to their normal daily routine.

What Preparation is required ?

To ensure that your child is hungry and ready to feed and sleep on arrival, please only feed a little of what they would normally take before your appointment.

Zips or clips on clothing can affect the images. Please have your child wear plain clothes without studs at the shoulders (with no sparkly print motifs).

What if my child is taking medication?

Do not stop any prescribed medications. The scan will not affect the usefulness of the drug. If you have any questions about this please contact the department.

How will I get the results of the test?

The results will be sent to the doctor who asked for this test, normally within 7-10 days. The doctor who has asked for the test will then send you a follow-up appointment to discuss your results with them. If this was your GP, please contact them directly after 7–10 days.

What if I do not speak English?

If you need help with the English language please phone **0131 312 0896** as soon as possible and we can arrange an interpreter for you.

How do I get to the CT Department.

The CT Department is in the Imaging Department on the ground floor. Book in for your appointment at the Imaging Department reception.

For more information about the Imaging Department and your scan.
